ABOUT

Systems Analysis and Development student at Unicamp, focused on web and mobile development, data analysis, and artificial intelligence. I have hands-on experience building applications, automating processes, and conducting machine learning research. My background combines a professional internship, a junior enterprise, undergraduate research, and academic activities — environments where I developed autonomy, delivery discipline, and a habit of learning by doing.

EXPERIENCE

IT Advisor · Tecnologia em Foco – FT Unicamp

May 2025 – Dec 2025 · Limeira, SP · *HTML, CSS*

The institutional web pages had usability issues and disorganized structure. I conducted a full audit, identified critical pain points, and developed new versions using HTML and CSS following best practices for layout and responsiveness. The pages were delivered with better content organization, clearer navigation, and improved performance.

Events & External Relations Member · Centro Acadêmico de Informática – Unicamp

Feb 2025 – Dec 2025 · Limeira, SP · *Event planning, Communication*

Students in the program had limited exposure to the tech industry. I planned and executed talks, workshops, and technical visits, handling logistics, communication, and outreach for each event. The result was greater engagement between students, professionals, and companies in the field.

Teaching Assistant – Mathematical Logic · Unicamp

Jan 2025 – Jun 2025 · Limeira, SP

A course with a high failure rate. I held regular tutoring sessions explaining propositions, predicates, and formal proofs in a clear, adaptive way based on each student's needs. Students showed noticeable improvement in understanding and fewer recurring doubts in lectures.

IT Advisor · Atria Jr.

Jun 2024 – Jan 2025 · Limeira, SP · *Flutter, HTML, CSS, Git*

I developed mobile apps with Flutter and web pages with HTML and CSS for 3 to 5 clients, covering the full project lifecycle in an agile environment with Git version control. All deliverables were completed on time, with positive client feedback on usability and quality.

QA Intern · MBD

Jan 2021 – Jan 2022 · Lorena, SP · *Ruby*

The regression test suite was executed manually each development cycle, consuming excessive time and prone to human error. I created detailed test cases, documented QA processes, and implemented full automation of the regression suite in Ruby. The result was the elimination of 100% of manual regression testing time.

UNDERGRADUATE RESEARCH

Coronal Mass Ejection Prediction with LSTM Neural Networks and Time Series

Unicamp · 2026 – present · Funded by PIBIC/CNPq · *Python, PyTorch*

I collected, cleaned, and performed exploratory analysis on 4,098 time-series instances from the SWAN-SF dataset and cross-matched the events with NASA's DONKI CME catalog. I designed and optimized a bidirectional LSTM with an attention mechanism in PyTorch, iterating over architecture and hyperparameters. The work produced predictive models evaluated with problem-specific metrics, and a research paper is in preparation.

Bug-Fix Effort Estimation Using Code Complexity Metrics

Unicamp · 2025 – 2026 · Funded by PIBIC/CNPq · Concluded · *Python, pandas, scikit-learn*

I automated the collection of approximately 2,000 bug fixes from public GitHub repositories via REST API, extracted cyclomatic complexity and LOC metrics with Python, and conducted statistical analysis using Spearman and Kruskal-Wallis tests. The hypothesis of correlation between code metrics and fix effort was tested and not confirmed by the data — a result formally documented as a contribution to the software engineering literature.

EDUCATION

Technology Degree in Systems Analysis and Development
Unicamp · 2024 – present

Highlights: Teaching Assistant in Mathematical Logic · 2 undergraduate research projects

CERTIFICATIONS

HackerRank: Python (Basic) · Problem Solving (Basic) · Java (Basic)

TECHNICAL SKILLS

Languages: Python · Java · JavaScript · C · C++ · Dart · Ruby · HTML · CSS
Development: Flutter · Flask / FastAPI · Git · GitHub · Docker · AWS · Design Patterns
AI & Data: LSTM / Neural networks · Time series · Data pipelines · PyTorch · scikit-learn · pandas
QA & Automation: Manual and automated testing · pytest · Test cases · QA documentation
Spoken languages: Portuguese (native) · English (upper-intermediate)
